Wireability Graph

"Cost" of Wiring

Minimum Spanning Tree

MST: Kruskal's Algorithm (1956)

- Draw the graph without any edges (so just the vertices).
- Sort all the edges, by weight, in ascending order.
- While there are edges left and we don't yet have an MST...
 - Select the smallest edge
 - Check if adding this edge to the graph would create a cycle
 - If no cycle, then add the edge to the graph
 - Repeat for the next smallest edge

~~BC~~, ~~DE~~, ~~AC~~, ~~CG~~, ~~BF~~, ~~CF~~, ~~FG~~, ~~BD~~, ~~EF~~, ~~BA~~, ~~AE~~, ~~DC~~
 2 2 3 4 4 5 6 6 7 12 12 19

Your turn...

- Draw the graph without any edges (so just the vertices).
- Sort all the edges, by weight, in ascending order.
- While there are edges left and we don't yet have an MST...
 - Select the smallest edge
 - Check if adding this edge to the graph would create a cycle
 - If no cycle, then add the edge to the graph
 - Repeat for the next smallest edge

MST: Prim's Algorithm (1957)

- Draw the graph without any edges (so just the vertices).
- Choosing an arbitrary vertex, add its smallest edge.
- While we don't yet have an MST...
 - Add the edge with the shortest distance from vertices in the MST to a vertex that is not yet in the MST.

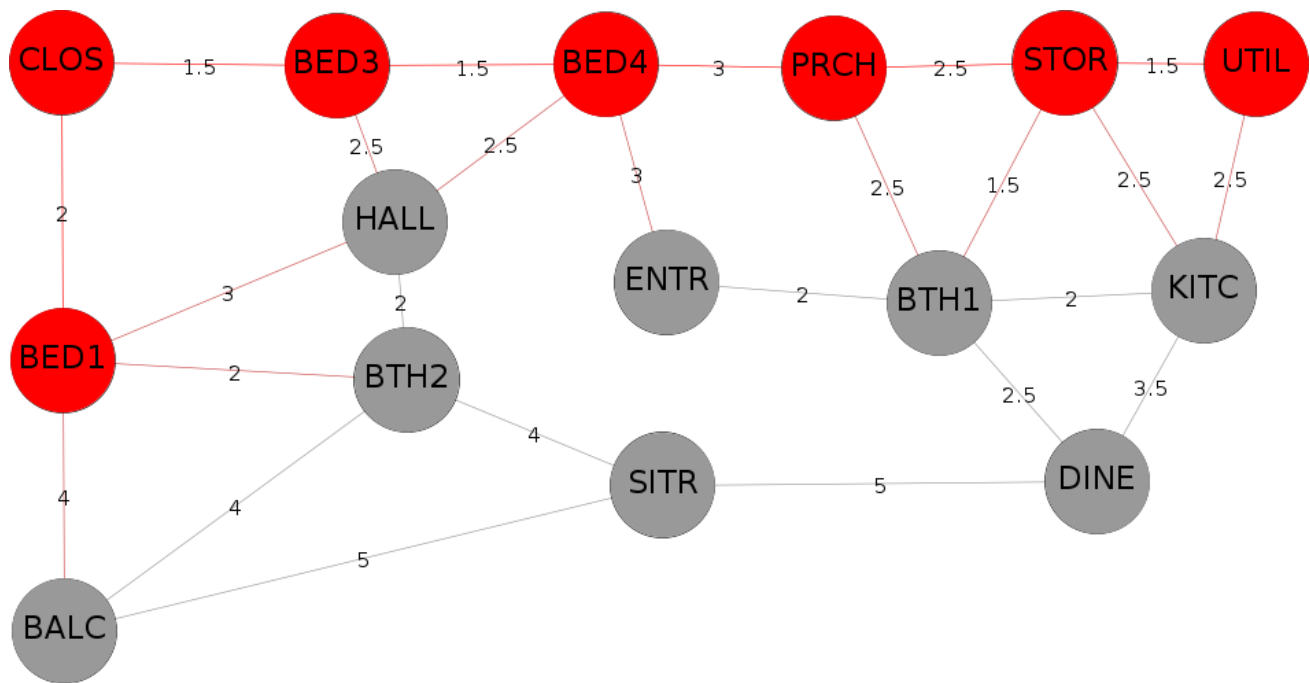

Your Turn...

- Draw the graph without any edges (so just the vertices).
- Choosing an arbitrary vertex, add its smallest edge.
- While we don't yet have an MST...
 - Add the edge with the shortest distance from vertices in the MST to a vertex that is not yet in the MST.
